

# 2022 UPDATE

# Data Hub Project

## ABOUT:

The New York School-Based Health Foundation has established a statewide data collection process, data repository and analytic tools for New York State's School-Based Health Centers (SBHCs). The Data Hub is possibly the most important strategy for the future of New York's SBHCs.

**For the first time ever, New York's SBHCs will be able to join all other health care sectors with data to:**

- Identify gaps in care
- Document outcomes
- Improve operations\*
- Advocate for SBHC value

\*The Data Hub Program will also support preparation of required State quarterly reports, saving SBHCs many hours of manual work.

## YEAR 1:

50  
SBHCS

34,491  
VISITS

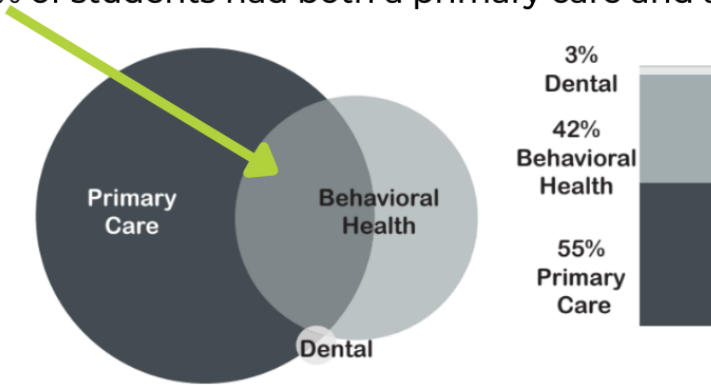

9,733  
PATIENTS

In 2020-21, 5 Pilot Sponsor Organizations operating 50 SBHCs documented 34,491 visits for 9,733 patients in the Data Hub.

## DATA TO HIGHLIGHT/REPRESENTS THE SBHC CARE MODEL:

SBHCs provide primary health care, behavioral health care, and dental services to all students, regardless of their ability to pay. Among our first 5 Data Hub participating organizations, 24% of students had both a primary care and a behavioral health visit.

Primary care visits include acute care, child well exams, immunizations, sports physicals, and reproductive health care.

Behavioral health visits include services for screening, counseling, and treating students' emotional, social, and psychological health. The top 3 behavioral health diagnoses encountered are anxiety, mood affective disorder, and depression.

## THE DATA HUB IS GROWING:

As of June 2022, 12 sponsoring organizations operating 113 SBHCs (42% of all New York's SBHCs) are participating in the Data Hub Program.
